---

November 16th is national GIS Day. GIS Day is a day set aside to celebrate Geographic Information Systems with everyone. Sheridan County and other organizations will be at the Chamber of Commerce building on November 16th from 10:00am until 6:00pm to showcase how we use GIS, and share that with the community. A Geographic Information System is a computer system for capturing, storing, creating, editing, managing, analyzing and displaying spatially referenced data. With GIS, you can link information to location data to discover how they relate to each other, and generate maps and displays to help create understanding. Geographic Information Systems are utilized in many fields and businesses; from archaeology to banking, finance, forestry, real estate, health, human services, and transportation. For more information, please call Richard Immell, Sheridan County GIS Coordinator at (307) 675-2473.
